Hello and welcome to my portfolio!

After working a variety of jobs throughout my adult life, including food delivery, construction, and retail, I decided I wanted to try something new. During that journey, I started following YouTube tutorials on programming and IT fundamentals and quickly became hooked. Since then, I've taken the leap into pursuing a degree in Computer and Web Programming at Lake Superior College, and I couldn't be happier with that decision.

One of the things I've enjoyed most so far has been collaborating with classmates and troubleshooting projects together. I'm excited to bring that same enthusiasm into future workplaces and projects with coworkers and clients. My favorite areas of study have been Java programming and server-side scripting. Learning how databases and back-end systems work together has been especially interesting to me.

I enjoy building practical, user-friendly solutions and learning new technologies along the way. Whether it's programming, problem-solving, or improving user experiences, I'm always looking for opportunities to grow my skills and contribute to meaningful projects.

Feel free to explore the projects on this site to get a better idea of my work. Thanks for stopping by!

Best,

Kyle Snyder
